

The sound absorption performance of the TecBoard™ is best utilized in drop ceilings and wall padding. The acoustic baffling qualities of TecBoard make it a great choice for a variety of locations:

- **Commercial:** Theaters, studios, offices, training rooms, restaurants and public meeting places such as worship centers and government facilities. Especially recommended for Doctor's offices and exam rooms; Event graphics promotions and Trade show booths.
- **Education:** Classrooms, multi-purpose rooms, gymnasiums, lecture halls
- **Residential:** Home theaters, offices and gyms

Condé[®] TecBoard[™]

This exciting new sublimation media from Condé will revolutionize the opportunities available for the dye sublimation industry. Decorators and renovation companies have long sought after architectural ceiling and wall covering material that has a firm but flexible quality. TecBoard[™] is the high technology solution to sound baffling for ceilings and walls in virtually any setting that can be imagined. Flexible tech board enables imaged boards to be bent in curves to embrace large columns or arched areas. Available initially as 2" x 4" panels, custom cut sizes will be available for special orders.

Condé Systems Print Services Department will image these architectural boards for clients that lack the wide format printer or press essential to producing the larger boards.

Creating a customized ceiling in your shop will excite shoppers and you can take orders for any size project, confident that Condé will help you every step of the way to provide this new dimension in services to your clientele.

Think of the old movie companies that erected large backdrops to provide the illusion of forests or cities behind two actors fighting for love or freedom. TecBoards can be imprinted with life-size images that transport the casual passer by to a new landscape.

Ceilings can be imprinted with the actual stars that line the heavens, providing the feeling that a person actually stands under the night sky. Use these panels in a drop ceiling and change them as you desire; the Four Seasons Restaurant could change the sky scenes from hot summer to overcast and stormy plus have wall panels that further set the mood desired.

Large buildings often have huge weight bearing cement columns in their lobbies that frustrate decorators with an inability to blend into the most modern design elements. With Tec Board, the awkward column draws the eyes, disguised as a tree or dressed with the flexible boards to become an accent or counterpoint to the artistic imagination of the designer. Similarly, awkward electrical panels or recessed lighting could be hidden or emphasized to further the illusion desired by the designer. A whole new way of expressing unique personalities in buildings, businesses and homes has finally arrived.
