

Important Notice: This is a heat transfer paper designed for use in desktop ink jet printers. This paper should not be used in printers with heating elements to dry the ink. This paper has been tested to run successfully on most standard brands of ink jet printers, however we make no claims or guarantees as to its suitability for any specific printer. Always test to determine the suitability of the paper for use in conjunction with your equipment and methods. The seller's and manufacturer's maximum obligation shall be to replace any paper which has been proven to be defective. Neither the seller nor the manufacturer of this paper shall be liable for any injury, direct or consequential, arising out of, or the inability to use this paper. Print results may vary on different ink jet brands or models. Output quality is dependent upon the user's hardware, software, and general knowledge and ability to use graphic and/or photo manipulating programs. Experimentation with your specific equipment may be necessary. This paper is not for use with laser printers.

Heat presses are recommended for professional and satisfying results because home hand irons cannot reach the temperatures required for a reliable transfer. Standard transfers require anywhere from 350°-425° F and demand serious force in pressing... often from 40-80 psi.

Congratulations On Your Purchase of JetMPrints™ Ink Jet Transfer Paper

Recommended Applications

White or light colored fabrics in polyester/cotton blends or 100% preshrunk cotton fabrics such as t-shirts, aprons, pillowcases, canvas bags, sweatshirts, caps, smocks, etc. It can also be used for transfer to mousepads, puzzles, and other specialty items.

Characteristics

- Compatible with a wide range of ink jet printers.
- Produces excellent results on a variety of fabrics.
- Allows you to transfer your images to fabric in seconds.

Imaging

- To separate paper, FAN as you would regular bond paper.
- Place paper in cassette tray (30+ sheets in cassette), or bypass tray, positioned to print on coated side (do not print on the side with the lines printed on it).
- For most printers: set to transfer paper mode. Some experimentation with different settings may be required to achieve best results.
- Use mirror image function to ensure a right reading image.
- Output via computer interface to printer.

NOTE: Some ink jet printers may require that you print at 300 dpi or less. High density printing might produce distorted and darkened colors after the transfer.

NOTE: Let ink jet transfers dry thoroughly before handling. Do NOT stack printed ink jet transfers. If printing multiple copies, remove prints immediately and separate so that they may dry.

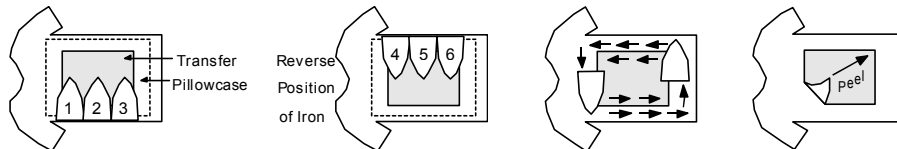

Pressing With A Commercial Heat Press (recommended method)

- Set heat press at 365°F - 375°F and at a heavy pressure.
- Place garment on heat press and pre-heat for 5 seconds to eliminate creases and moisture.
- Trim away clear areas from around image.
- Place transfer in desired position on the garment with image face down.
- Press for 20 seconds with heavy pressure. Rub transfer before peeling. Peel hot for a satin finish. Peel cold for a glossy finish.

NOTE: You may wait for the transfer to cool completely - a cold peel will give the image a very glossy finish. To start a cold peel: stretch fabric slightly at a corner to assist in getting the corner loose to start the peel.

Pressing With A Household Iron

- Cut away blank, unprinted area of transfer.
- Pre-heat "DRY" iron for 5 minutes at highest possible setting. DO NOT USE STEAM OR SPRAY!
- Create ironing surface by folding a pillowcase in half and placing onto a smooth, sturdy, heat resistant surface ONLY. DO NOT USE AN IRONING BOARD! Be certain pillowcase is free of wrinkles.
- Place garment onto pillowcase, centering area to be transferred directly over pillowcase.

- Pre-press the garment to eliminate creases and moisture.
- Place transfer (IMAGE SIDE DOWN) onto garment making sure all four edges are also centered over the pillowcase.
- Using two hands and forceful pressure, slide the iron over the surface of the sheet until it sticks to the fabric. (continued on back)

Delivering all the value of today's color output technology.™

www.conde.com

- Using two hands and forceful pressure, press iron firmly in each of six (6) positions (as illustrated) for 15 seconds each.
- Using two hands and forceful pressure, slide the iron over the edges of the transfer for 15 seconds and then entire transfer area for an additional 30 seconds.
- Allow the transfer sheet to cool for at least 2 minutes. Stretch fabric slightly at a corner to assist in getting the corner loose to start the peel. Holding the detached edge, peel the paper back slowly from the fabric.

NOTE: The cold peel procedure is recommended when applying transfers with a hand iron because it is difficult with some irons to maintain enough heat over the entire transfer surface to permit time for setting the iron on the table and the transfer staying hot enough to peel smoothly as a hot transfer normally would when applied with a commercial heat press. However, if you wish to peel transfer hot for other reasons, the transfer can be reheated as many times as necessary to allow for a smooth, hot peel.

Washing Instructions

- Turn garment inside-out and machine wash in cold or warm water.
- Use a mild detergent only. Do not use bleach or liquid fabric softener! Detergents with bleach additives are not recommended.
- Remove garment from wash immediately and tumble dry using LOW HEAT or AIR ONLY setting.
- Do not iron directly on the transfer area. Use a teflon sheet or some baking parchment to cover the transfer before ironing.

Blank Imprintables

Condé carries everything a business-minded individual needs to get started including a full line of imprintables. JetMPrints can generate incredible revenue for screenprinters and embroiderers who want to offer a more versatile product line and generate revenue through short-run add on sales.

Mouse Pads

White polyester fabric fused to black rubber

Description	Part #	Dimensions
Rectangle	MP89	7.75" x 9.25" x .25"
Round	MP800	8" diameter x .25"

Wrist Wrists

White polyester fabric fused to black rubber

Description	Part #	Dimensions
Large	W174	17.5" x 4" x .5"
Small	W163	16" x 3.5" x .5"

Coasters

White polyester fabric fused to black rubber

Description	Part #	Dimensions
Round	C375	3.75" diameter x .1875"
Square	C400	3.75" x 3.75" x .1875"

T-Shirts

Hanes Beefy T; 100% cotton; available in white or natural

Description	Part #
Adult Small (white)	5180S
Adult Medium (white)	5180M
Adult Large (white)	5180L
Adult X-Large (white)	5180X
Adult XX-Large (white)	5180XX
Adult XXX-Large (white)	51803XL
Youth X-Small (white)	5380XS
Youth Small (white)	5380S
Youth Medium (white)	5380M
Youth Large (white)	5380L
Adult Small (natural)	5180NS
Adult Medium (natural)	5180NM
Adult Large (natural)	5180NL
